While some of us readily embrace the rapidly changing landscape of technology in our ‘consumer’ lives, it can prove challenging to adopt technology at the same pace in our professional lives as healthcare leaders. Part of the challenge lies in simply keeping up, another part includes a comprehensive enough understanding of available technologies in order to make an informed decision. Knowing what the future might hold can help us envision a healthcare environment that supports and enhances healthcare practice at all levels. We will explore the use of technology in the acute care environment, the community setting, the home, Telehealth, mHealth, personal health records and more, as well as take some time to look at what exciting things the future holds for us in the realm of healthcare technology.
